

Group Policy Force

After changing a domain on a computer, you may need to run a **Group Policy Force**.

- 1) **Start > run**
- 2) In the Run Window, type **cmd** to open the command prompt window.

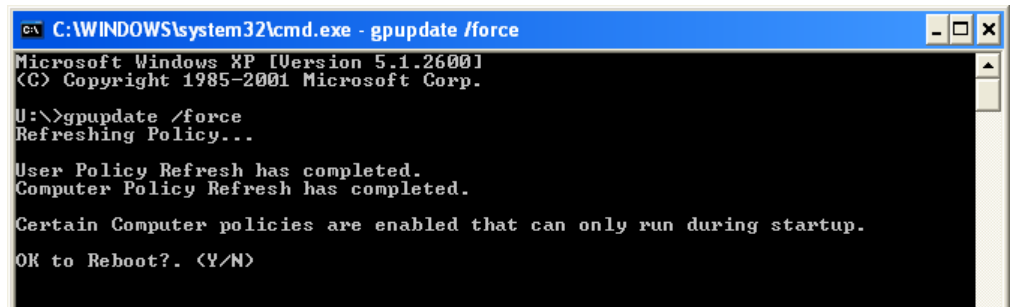

- 3) In the window you should see a flashing cursor. Type **gpupdate /force** make sure to only include the space before the forward slash and no other spaces.
- 4) Press **Enter** on keyboard

- 5) You should see a message that it is Refreshing Policy for a few minutes, then it should say “Refresh has completed” and then prompt to reboot.

- 6) At the reboot prompt, enter a **y** then press **ENTER** on keyboard to continue.

- 7) If you do not receive a prompt to reboot after running the refresh policy, you may need to re-run the “gpupdate /force” again, and this time restart manually if it does not prompt.
- 8) After this process it should be ready for all student use and the normal testing icons should show when the computer is logged in with a student ID.
